Hello,

The Pre-RD group is currently stationed and in the Multnomah Channel, searching for AR-A05 which is believed to be anchored to shore.

Oversight observed tangled coils on board the deck while the crew was operating the davat. The crew was reminded of the hazards and "good house keeping" practices that were discussed in their health and safety meeting. AECOM Field lead informed oversight that the crew would make sure feet were out of the rope loops and coil hazards would be managed moving forward.

Included are photos of the crew stationed in the Channel retrieving AR-A05 from the shore.

Jonni
